Describe / Summarize the concepts you have learned in the Java course so far.

We have learned about the Java syntax, operators, types, different kinds of statements, and arrays, along with how to use each of these effectively. We have also learned about how the Java programming language is applied in real world situations, and why it is practical and highly applicable.

Describe any problems you faced while learning the concepts / topics described above.

I did not really experience any problems as I have previous knowledge and experience using Java.

How did you overcome them?

N/A

What lessons have you learned for the future?

Manage my time better, fully read the instructions before trying to answer any questions.
